Alerting Abstract KR A

NOVELTY - A cleaning cloth is provided to effectively clean contaminants with reduced force by alternatively disposing a cleaning portion for cleaning contaminants and a slip portion slipped on the objected cleaning face.

DESCRIPTION - A cleaning cloth consists of a pile fabric which is formed by twisting a separate pile thread(16,26) between the warp threads and the weft threads. The cleaning cloth comprises a closed cleaning portion(10) and a slip portion(20). The closed cleaning portion is applied to an objected cleaning face so as to clean contaminants adhered to the objected cleaning face. The slip portion consists of pile thread thicker than that of the closed cleaning portion and is slipped through the objected cleaning face. The pile thread of the closed cleaning portion adapts a micro fiber having less than 0.3 denier, and pile thread of the slip portion adapts fiber having 20 to 30 denier.
